

Abstract of the invention:

Method and apparatus for dispensing aggregates for lawn  
improvement. Aggregates are delivered to the site in a primary dispensing  
5 vehicle, which is configured to allow a smaller secondary dispensing  
vehicle to be loaded with the aggregate directly from the primary vehicle.  
The process includes aerating the soil, distributing a variety of soil  
amendments evenly over the area to be treated and then dragging a unique  
drag mat over the area to make a smooth contour and to even the  
10 distribution of the aggregate.
